ITOCHU INSIGHT — HYBRID RAG FINANCIAL INTELLIGENCE WITH 107 SPECIALIZED AGENTS

107 agents. One intelligence platform for Itochu — built on NeuralSeek.

Hybrid RAG-powered financial intelligence combining SEC EDGAR filings, live web research, and private documents — orchestrated through a graph of 107 specialized agents. Deployed inside Itochu's environment with Microsoft Entra single sign-on, JWT-validated sessions, and per-tenant document isolation.

ANNUAL REVENUE

~\$90_B

Approx. FY revenue (~¥14T) — one of Japan's largest corporations by sales.

EMPLOYEES

120,000₊

Across the global Itochu group and subsidiaries.

MARKET POSITION

Big 5

Fortune Global 500 member and one of Japan's "big-5" sogo shosha general trading houses.

VOICE OF THE CLIENT

In **Tony's** words — a conversation with our partner at Itochu International.

A short Q&A with Tony Chang on working with NeuralSeek through this engagement.

DIRECTOR, IT STRATEGY DIVISION

Tony Chang

Tony directs IT strategy at Itochu International and runs the Itochu Insight engagement with NeuralSeek — a 107-agent financial intelligence platform deployed inside Itochu's Azure environment.

Q1 What parts of NeuralSeek impress you?

The speed and flexibility of their low-code, no-code development platform stand out. We were able to leverage our Azure cloud infrastructure effectively, and the deep research in full mode is quite fast. They accommodated our use case well, and the ability to make quick fine-tuning changes has been especially helpful for the project.

Q2 Thoughts on NeuralSeek having an implementation arm and experience doing enterprise go-lives.

The implementation team for the POC has been excellent. They were highly responsive in making changes and resolving bugs. The onboarding process and project management helped accelerate the project's kickoff. The team also demonstrated a forward-thinking approach, developing the application with scalability in mind.

Q3 General feedback on our team.

Overall, it has been a positive experience, and we're glad we started this engagement.

WHAT'S INSIDE THE ENGAGEMENT

5 CASES

Use cases delivered for Itochu International.

01 Hybrid RAG financial intelligence

A unified retrieval layer that blends SEC EDGAR filings, live web research, and Itochu's private documents — with BM25 plus dense vectors so answers stay precise whether the source is a 10-K footnote or an uploaded PDF.

BM25 + VECTOR

SEC EDGAR

PRIVATE DOCS

02 107-agent orchestration

Two LangGraph workflows — a Main Orchestrator that resolves a company and fans out to ingestion, search, and analysis sub-agents, and a Reports Orchestrator that drives the Summary, Longitudinal, Risk, and Peer Comparison decks through parallel section agents with a shared variable store.

LANGGRAPH

107 AGENTS

SHARED STORE

03 5-year XBRL financial dashboard

Revenue, margins, EBITDA, and ROE pulled directly from SEC EDGAR XBRL, with YoY deltas and per-metric trend charts. Every metric documents its source filing (10-K / 20-F / 40-F / 10-Q / 6-K) and whether it was reported or derived.

YOY DELTAS

CITED FILINGS

04 Cited, multi-source agent chat

Analysts toggle between Quick Scan and Deep Research modes. Every response blends SEC filings, web research, and uploaded documents — with inline source attribution so reasoning is auditable back to the original artifact.

INLINE CITATIONS

AUDITABLE

05 Report generation — PDF & editable PPTX

On demand, the Reports Orchestrator assembles four deck types and deterministically stitches them into polished PDFs and editable PowerPoint files — ready to drop into an Itochu analyst workflow without post-processing.
